

Système de veille

Dans le cadre de ma veille technologique, j'ai structuré mes recherches en deux axes principaux. Le premier, intitulé 'Menu Maker', sera dédié aux actualités concernant React, les bases de données et d'autres sujets liés. Le second axe, 'Web Development', se concentrera sur les frameworks, bibliothèques et autres tendances du développement web.

The image displays two screenshots of a RSS reader application, likely Feedly, illustrating a structured monitoring system.

Top Screenshot (General Feed):

- Left Sidebar:** Contains navigation links (Today, Read Later, Feedly AI, Integrations & API), a FEEDS section with 'All' (306), 'Menu Maker' (289), and 'Web Development' (17), and a BOARDS section.
- Main Content:** Titled 'Today', it shows a list of articles under the 'MENU MAKER' category. The first article is 'How can one write better, maintainable React code?' by Anton on Security, published 24 hours ago. Other articles include 'Introducing Skeleton for React - a Tailwind-based design system and component library' and 'Tanstack Query useQuery with POST requests'.

Bottom Screenshot (Filtered Feed):

- Left Sidebar:** The 'Integrations & API' filter is selected in the sidebar. The FEEDS section now lists specific sources like 'Anton on Security', 'MongoDB I Blog', 'Node.js Blog', 'OpenAPI Initiative', 'r/reactjs', 'React Blog', 'Grafikart.fr', 'MDN Blog', 'Sass Blog', 'Traversy Media', 'Visual Studio Code - Code E...', 'W3C - News', and 'WebAIM Blog'.
- Main Content:** The article list is filtered to show only items related to 'Integrations & API', displaying the same set of articles as the top screenshot.
